

PQAO TRAINING 2019

Technology Update Regulatory PM Monitoring

June 6, 2019

Simon Cheung

Air Quality Surveillance Branch
Monitoring and Laboratory Division
California Air Resources Board

A graphic of a clipboard with a brown border and a silver clip at the top. The clipboard contains a white sheet of paper with text and a bulleted list. On the left side of the slide, there are decorative diagonal stripes in blue and grey.

Overview

- Introduction
- PM History
- T640 Evaluation
- Next Steps

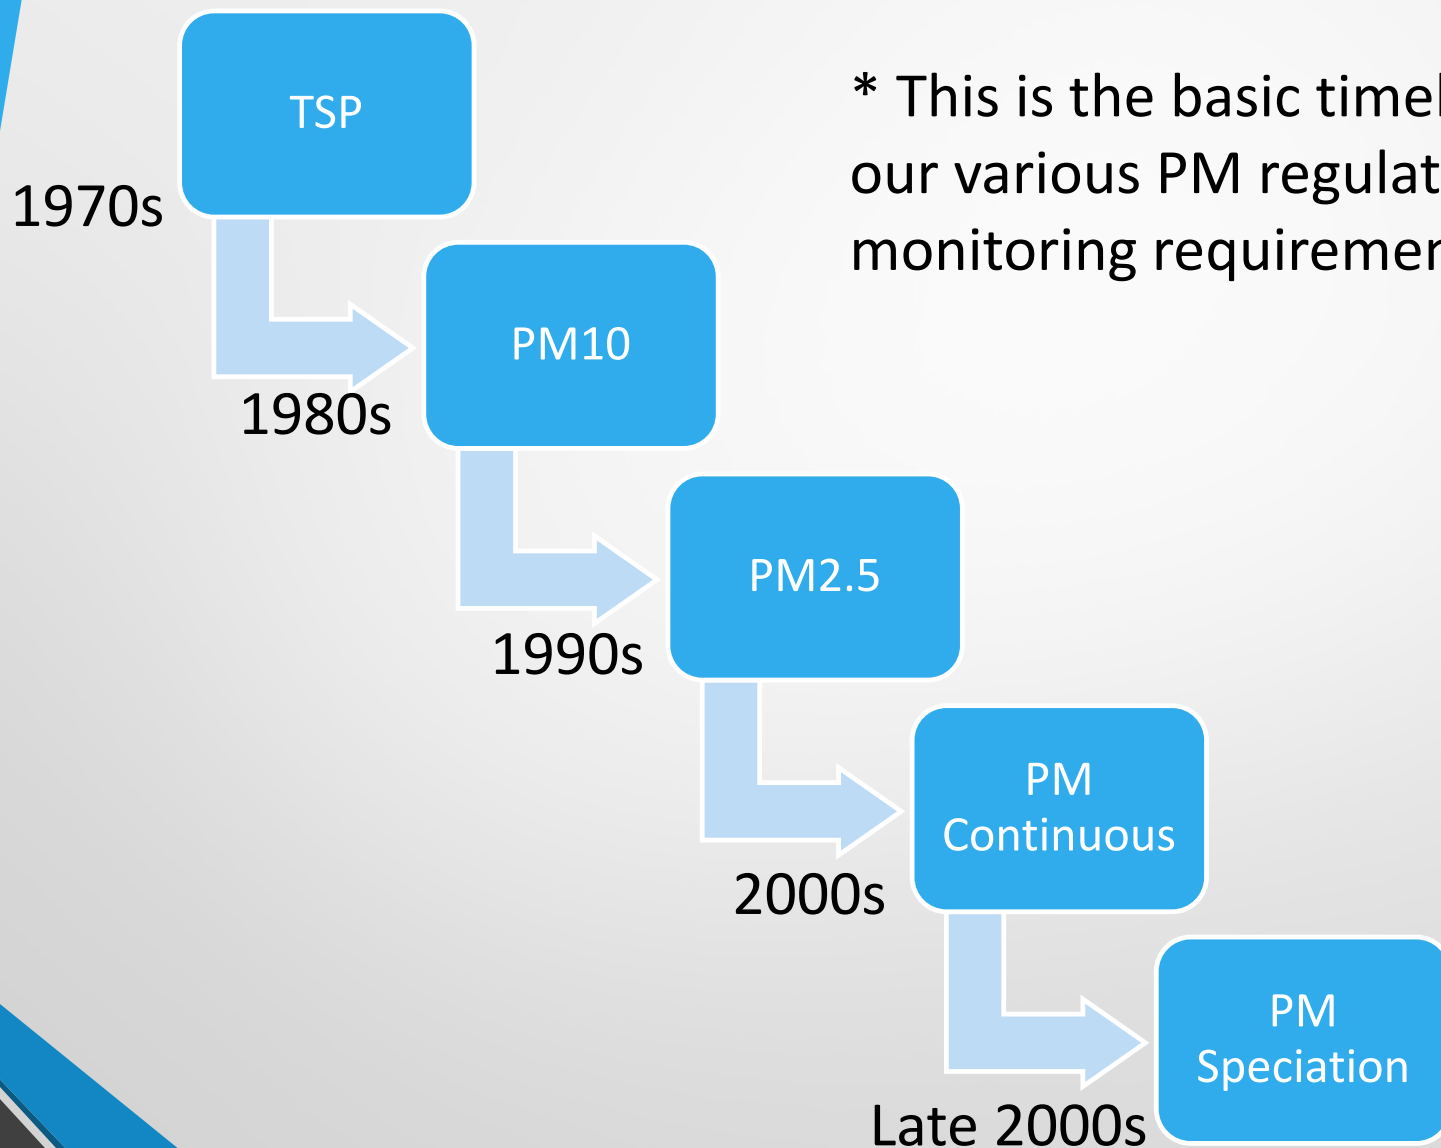

Introduction

- A function of my section is to look for better and more reliable technology for our PM monitoring program.
- Talk and share our experience with recent PM instrument evaluation.
- Highlight three field studies with the Teledyne API (TAPI) T640.
- Next Steps?

Particulate Matter

- Is a criteria pollutant.
- Regulated in CA: PM10 and PM2.5.
- Poses risk to our health.
- Measured primarily for areas to determine attainment status.
- Data reporting: AQI, AIRNOW, Ag Burn, etc.
- Requires reliable instrument to provide accurate measurement.

CARB's PM Monitoring History

* This is the basic timeline for our various PM regulation and monitoring requirements.

CARB's PM Program

- Dated back to 1970s.
- First started with filter-based FRM sampler.
- Manual sampling.
- Daily averages only.
- Demands for more time-resolved data led to continuous monitoring.

Thermo Partisol 2000

CARB's PM Program (cont.)

- In early 2000s BAM had become popular.
- Continuous sampling.
- Different options of cut head (FEM vs non-FEM).
- Hourly averages.
- Been used widely by PQAQO as a standard PM instrument.

EBAM Plus

Thermo
5030i SHARP

TAPI
602 Beta Plus

Teledyne API T640

- Continuous monitor.
- Uses scattered light spectrometry.
- FEM designated PM2.5 but also measures PM10 and PMC.
- Minute averages.
- Indoor or outdoor installation

TAPI T640

* TAPI has an enhanced version called T640X for FEM PM10 and PMC as well.

T640's Quick Specs

Parameter	Specification
Measurement Principle	Broadband spectroscopy using 90° white light scattering with Polychromatic LED
PM Mass Measurements	PM2.5, PM10, PM Coarse (10-2.5)
Measurement Range	0.1 – 10,000 µg/m ³
Data Resolution	0.1 µg/m ³
Lower Detectable Limit	<0.1 µg/m ³ (1-hr average)
Data Rate	10s to 48hr (user selectable)
Sample Flow Rate	5.0 LPM within ±1% accuracy
Communication	Ethernet (TCP/IP Modbus & HTTP Protocols)
Operating Temp. Range	-40 to +60°C
Operating Humidity Range	0 to 100% RH, non-condensing
Dimensions	7"x17"x14" (Unit) + 43" (Heater Tube)
Weights	19lbs (Unit) + 6lbs (Heater Tube)
US EPA Designation	US EPA Class III FEM (EQPM-0516-236)

Maintenance Checklist

CARB INSTRUMENT MONTHLY QUALITY CONTROL MAINTENANCE CHECK SHEET API T640 PM MASS MONITOR

Location: _____ Month/Year: _____
 Station Number: _____ Technician: _____
 Property Number: _____ Agency: _____

Operator Instructions:

- 1) Daily: Review station data logger values for correct operation of T640 monitor.
- 2) Biweekly: Check the system clock.
 Check the ambient temperature and pressure.
 → Perform T640 flow check. (5.0LPM ± 0.25LPM)
 → Perform T640 zero check. *** No vacuum leak check on this instrument.
- 3) Monthly: Complete this Monthly Quality Control Maintenance Check Sheet.
 Thoroughly clean the T640 inlet.
 Check pump performance. (PWM value < 80%)
 → Check/Adjust PMT with SpanDust™. (Measured peak, limit: 11.3 ± 0.5)
 PMT Peak: _____ Date Last Performed: _____
- 4) Semi-annual: Inspect and clean optical chamber and RH/T sensor.
 Change the disposable filter unit (DFU).
- 5) Annual: Inspect sampling line, or as needed.

Transfer Standard Used:

Make/Model	Serial/I.D. Number	Date Certified

Bi-Weekly Sampler Flow Rate, Ambient Temp, and Pressure Check Results:

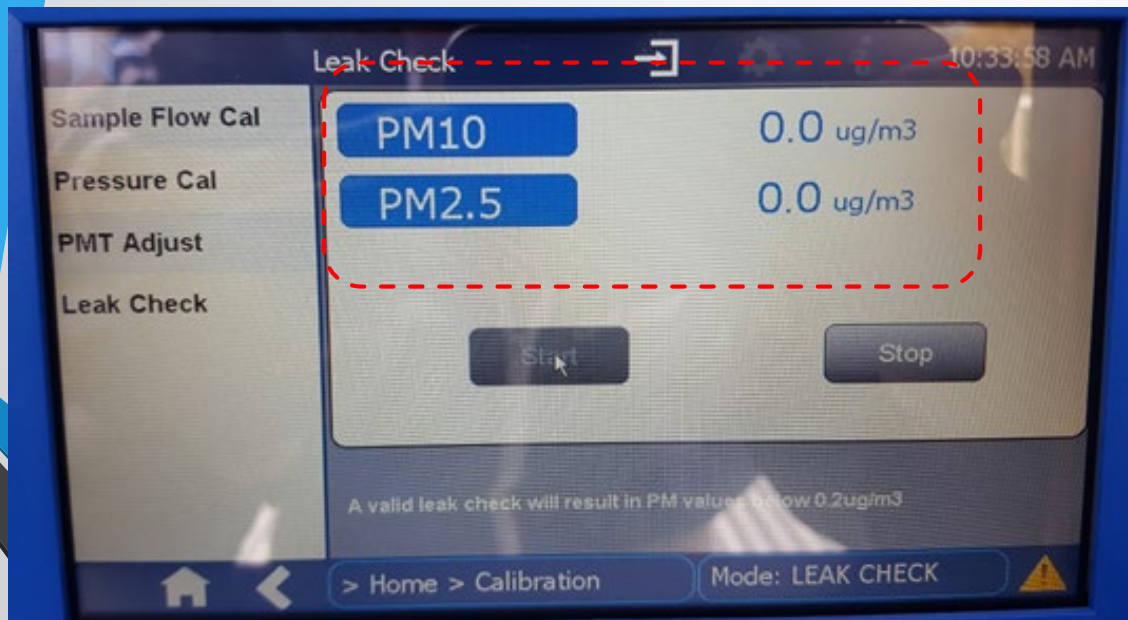

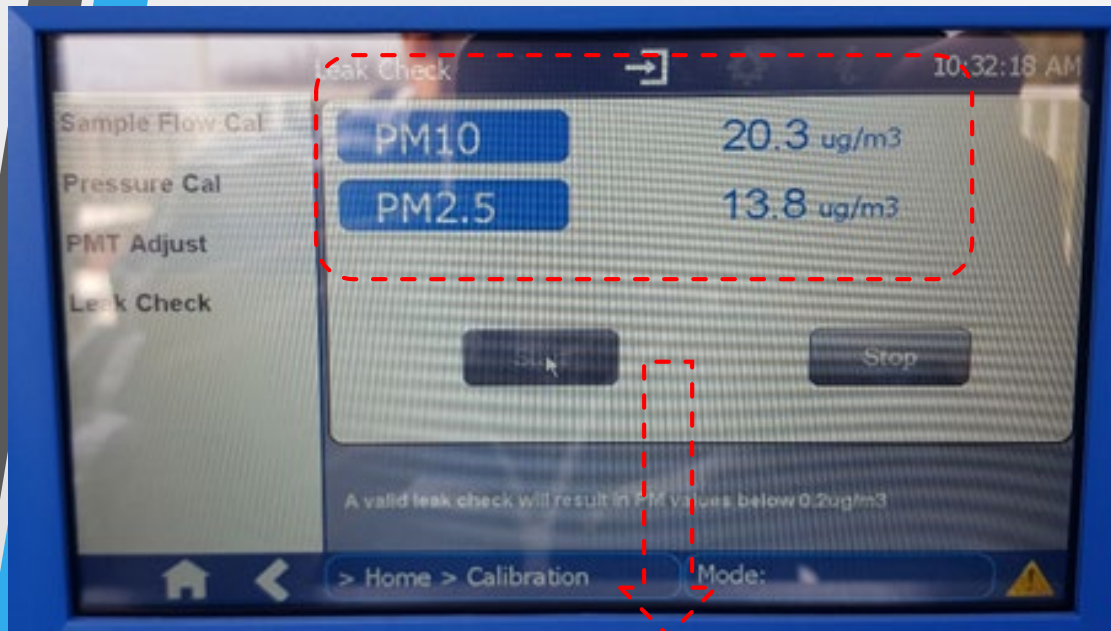

Date:	Sampler	Standard	Difference	Control Limits*
Flow Rate				5.0 ± 0.25 LPM
Ambient Temp.				± 2 °C
Ambient Press.				± 10 mm Hg
Zero Check				< 0.1 µg/m ³

Tools Needed for Checks

Zero Test

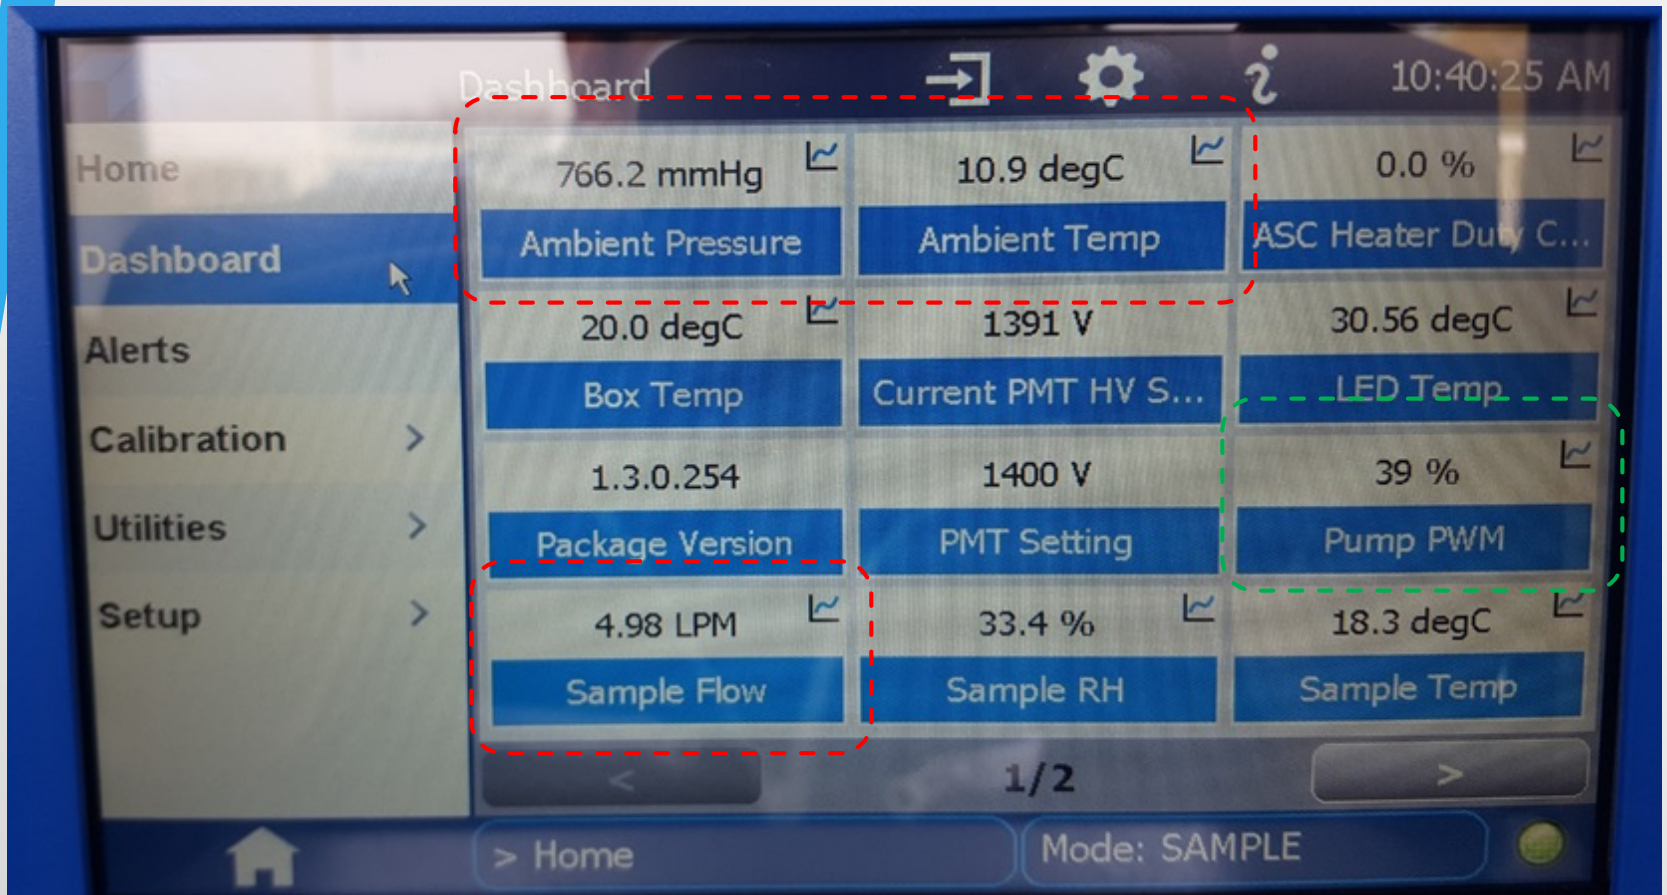

- Initiate the “Leak Check” from Calibration screen, and watch the PM monitors to drop to zero.

Flow Check

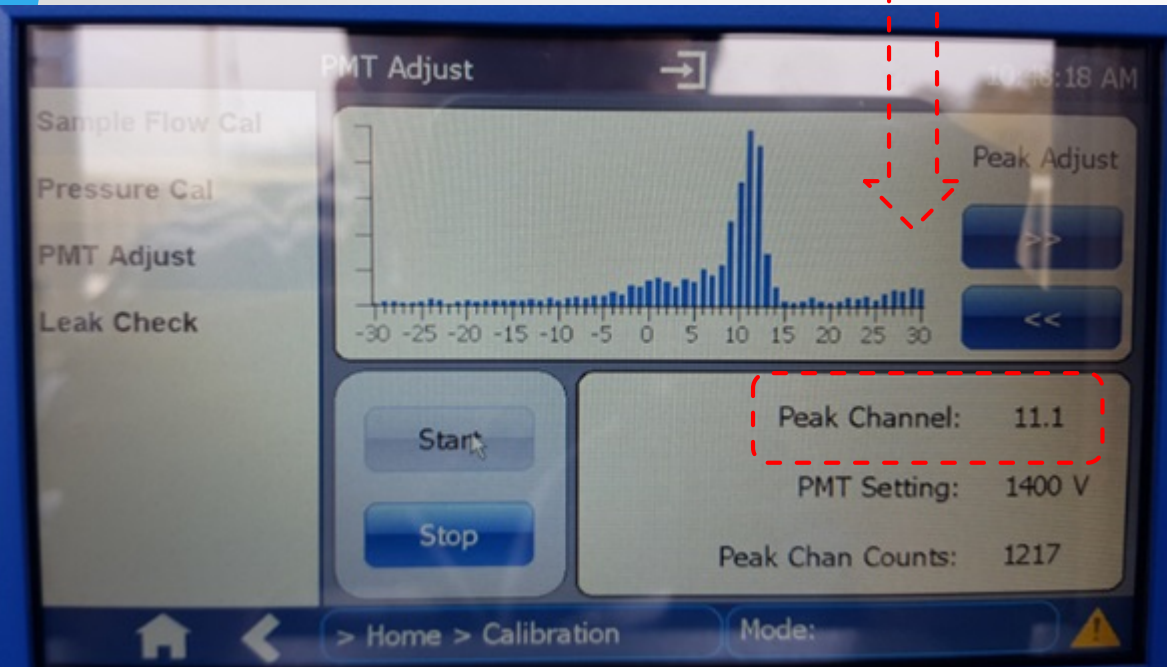

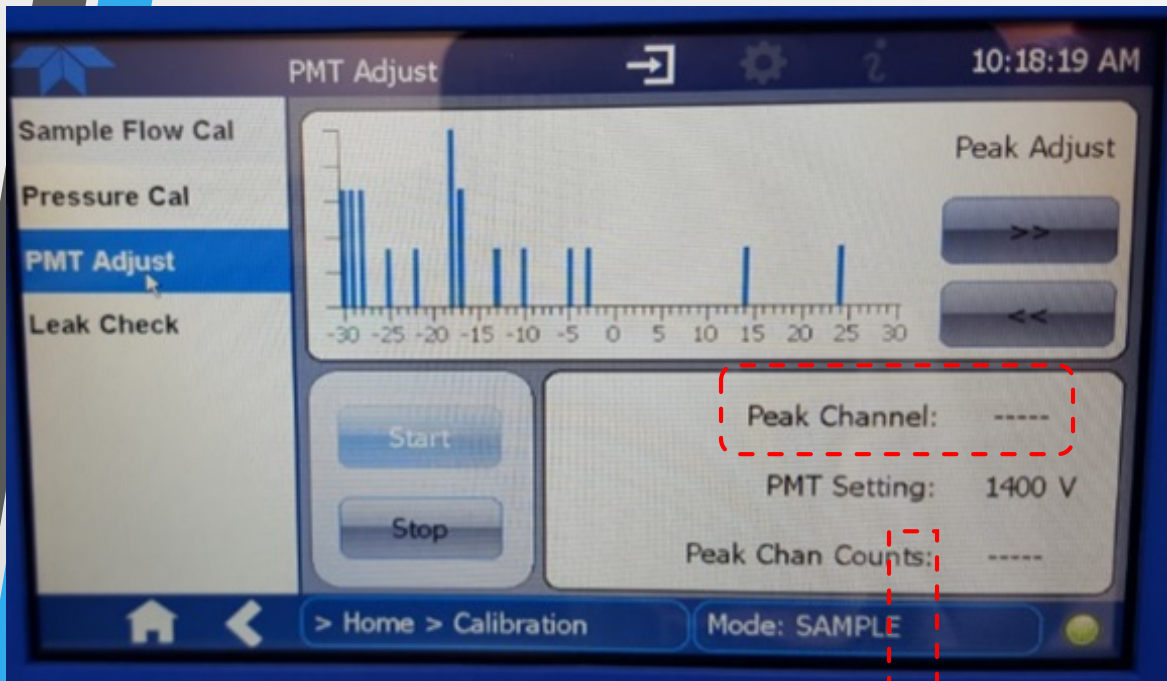

Bi-Weekly Sampler Flow Rate, Ambient Temp, and Pressure Check Results:

Date:	Sampler	Standard	Difference	Control Limits*
Flow Rate	4.98	5.01	0.03	5.0 ± 0.25 LPM
Ambient Temp.	10.9	12.1	1.2	± 2 °C
Ambient Press.	766.2	763.5	2.7	± 10 mm Hg
Zero Check	0.0			< 0.1 µg/m ³

SpanDust Check

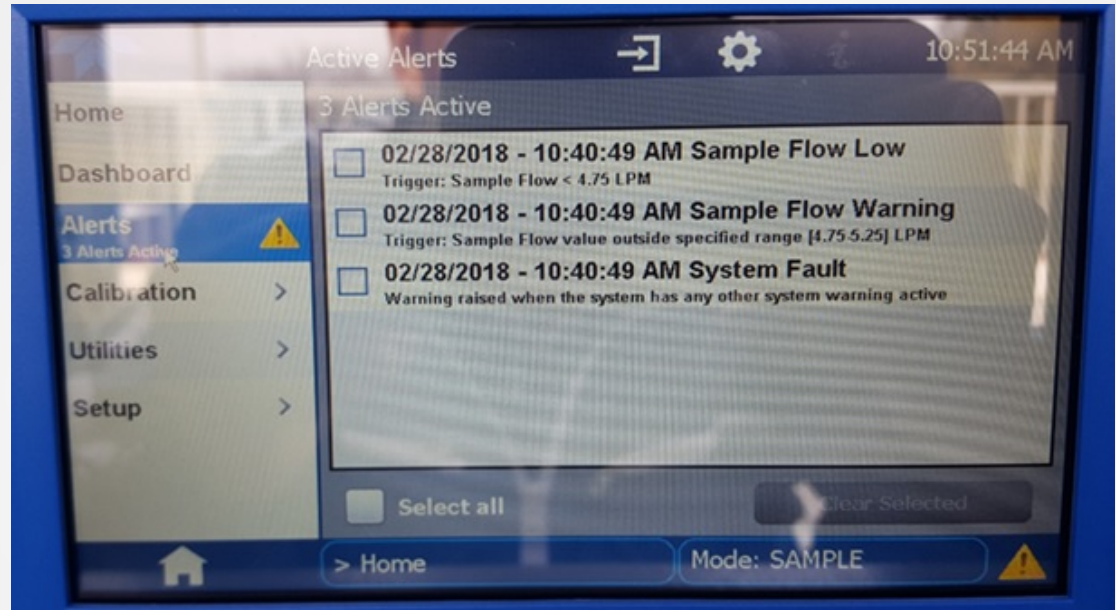

- Initiate the “PMT Adjust” and check for the Peak Channel reading.
- The allowed range is ± 0.5 of the specified target.
- If PMT check fails, inspect the optical chamber.

After Maintenance Checks

- Alert Messages

- Abnormal Readings (~10 mins)

Field Evaluations

- Three different campaigns:
 - Sacramento – T Street : Nov-2017 to Sep-2018
→ an urban site in downtown Sacramento
 - Chico – East Ave : Oct-2018 to Mar-2019
→ a rural site surrounded with agriculture
 - Brawley (Imperial County) : Jul-2018 to Mar-2019
→ a rural site in SoCal near the desert

Sacramento – T Street

24-hr Averaged PM2.5 Comparison

Time series of Daily PM2.5 measurements: T640, BAM25, and FRM from 11/21/2017 thru 9/11/2018

Sacramento – T Street

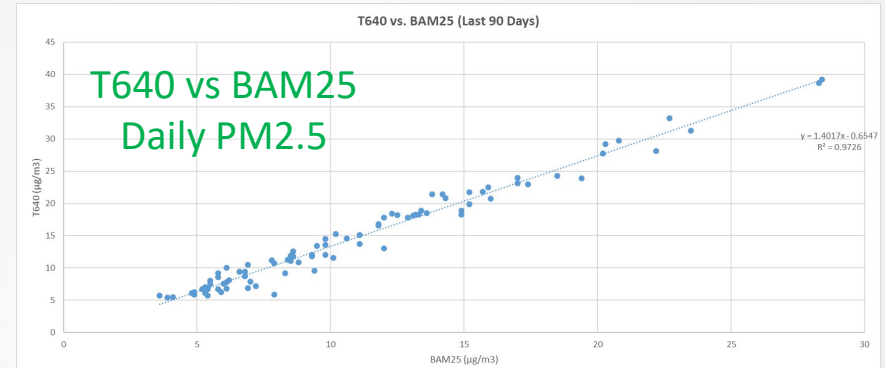

Hourly PM2.5 Comparison (July-11 to September-10, 2018)

Linear Regression (24-hr Averaged PM2.5)

First 90 Days @ Sac-T

Last 90 Days @ Sac-T

Linear Regression (24-hr Averaged PM2.5)

Summary of Sac-T's Daily PM2.5 comparison between T640, BAM25, and FRM.

Y vs. X	First 90 Days	Last 90 Days
T640 vs. BAM25	$Y = 0.9885X + 0.1323$ $R^2 = 0.9762$	$Y = 1.4017X - 0.6547$ $R^2 = 0.9726$
T640 vs. FRM	$Y = 1.0087X + 1.1985$ $R^2 = 0.9864$	$Y = 1.4014X - 1.8162$ $R^2 = 0.9783$
BAM25 vs. FRM	$Y = 1.0005X + 1.3830$ $R^2 = 0.9870$	$Y = 0.9885X - 0.4220$ $R^2 = 0.9738$

* During the smoky days, T640 reported ~40% higher than the collocated monitors.

Chico – East Avenue

24-hr Averaged PM2.5 Comparison

Time series of Daily PM2.5 measurements: T640, BAM25, and FRM
from 10/1/2018 thru 1/31/2019

Chico – East Avenue

Hourly PM2.5 Comparison (November 2018)

Linear Regression (24-hr Averaged PM2.5)

Summary of Chico-East's Daily PM2.5 comparison between T640, BAM25, and FRM.

Y vs. X	Nov-2018	Dec-2018 to Jan-2019
T640 vs. BAM25	$Y = 1.4388X - 0.6300$ $R^2 = 0.9946$	$Y = 1.1999X + 0.4338$ $R^2 = 0.9703$
T640 vs. FRM	$Y = 1.4173X - 1.9535$ $R^2 = 0.9986$	$Y = 1.1429X + 0.4944$ $R^2 = 0.9798$
BAM25 vs. FRM	$Y = 1.0174X - 0.8161$ $R^2 = 0.9996$	$Y = 0.9343X + 0.4103$ $R^2 = 0.9754$

* T640 reported ~43% higher during Camp Fire.

** For wood burning season, T640 reported around 15~20% higher.

Brawley (Imperial County)

24-hr Averaged PM10 Comparison

Time series of PM10S measurements: T640, BAM10, and EBAM+ from 8/1/2018 thru 3/31/2019

Linear Regression (24-hr Averaged PM10)

Summary of Brawley's Daily PM10 comparison between T640, BAM10, and EBAM+.

Y vs. X	Overall
T640 vs. BAM10	$Y = 1.1294X + 7.6089$ $R^2 = 0.9319$
T640 vs. EBAM+	$Y = 1.2973X + 3.1476$ $R^2 = 0.9351$
EBAM+ vs. BAM10	$Y = 0.8782X + 3.1809$ $R^2 = 0.9879$

* T640's PM10 in general correlated with other monitors but reported higher. Could it be due to the lower flowrate?

Overall Feedback

- Wood smoke influence on performance... 😐
- More expensive than the BAMs... 😞
- Ethernet-only telemetry... 😐
- Good portability... 😊
- Real-time minute data... 😊
- Multi-parameter measurements... 😊
- Do not require sample filter or tape... 😊
- Low maintenance requirement... 😊

What now?

- Field evaluation for T640 is done.
- All data and findings have been shared with TAPI.
- CARB has no plan for T640 deployment yet.
- T640 still has the potential to be used for other types of monitoring (e.g. oil & gas, or community air).
- Write a staff report to summarize these evaluations.
